2. **Microscopic Anatomy:** Examines structures at the cellular and tissue level, utilizing microscopes.
3. **Developmental Anatomy:** Studies the body's development from conception through adulthood.
4. **Clinical Anatomy:** Applies anatomical knowledge to medical practice and diagnosis.

Major Human Body Systems

The human body comprises several organ systems, each with specific functions vital to survival:

1. **Skeletal System:** Provides structure, support, and protection.
2. **Muscular System:** Facilitates movement and stability.
3. **Nervous System:** Controls body functions and responds to stimuli.
4. **Endocrine System:** Regulates hormones and maintains homeostasis.
5. **Circulatory System:** Distributes blood, nutrients, and oxygen.
6. **Respiratory System:** Facilitates breathing and gas exchange.
