This article offers a comprehensive introduction to airborne radar, exploring its fundamental principles, types, components, applications, and future trends to provide a clear understanding of this vital technology.

What is Airborne Radar?

Airborne radar refers to a radar system installed on aircraft, designed to emit radio waves and interpret the signals reflected back from objects in the environment. Unlike ground-based radar, airborne systems benefit from the mobility of aircraft, allowing for rapid deployment over vast areas and versatile operational capabilities. These radars are essential for:
